PROFESSIONAL SUMMARY

Final-year B.Tech student in Artificial Intelligence and Data Science with practical experience in full-stack development and applied AI. Proficient in building scalable systems and automated developer tools using **Python**, **Go**, and **Vue.js**. Experienced in end-to-end ML pipeline development, LLM integration, and crafting seamless UI/UX experiences. Seeking a Software Engineering or ML/AI role to leverage my expertise in solving real-world technical challenges.

TECHNICAL SKILLS

Languages: Go (Golang), Kotlin, Java, Python, C++, SQL
Frameworks & Libraries: Vue.js, Gin (Go), Streamlit, Scikit-learn, Pandas, NumPy
Tools & Platforms: Git, GitHub, Docker, Android Studio, VS Code, IntelliJ IDEA, Power BI, Firebase
Concepts: RESTful APIs, Agile Development, Machine Learning, Data Preprocessing, OOP.

WORK EXPERIENCE

- Software Development Intern** January 2026 – Present
Maharashtra Knowledge Corporation Limited (MKCL) *Pune, India (Onsite)*
- Enterprise governance and management systems required robust, scalable full-stack solutions. Collaborated with core engineering teams to develop and maintain production-grade features. Built frontend modules using **Vue.js** and backend services with **RESTful APIs**, following clean architecture principles.
- Machine Learning Intern** June 2025 – July 2025
Edunet Foundation (AICTE Virtual Internship – in collaboration with Shell) *Remote, India*
- Real-world environmental datasets for water quality contained missing values, outliers, and multiple target variables, making prediction non-trivial. Responsible for building a complete ML solution for water safety prediction.

PROJECTS

- Prism** | *Python, Go, Vue.js, Gemini LLM, VS Code API* | 🐙 GitHub April 2026
- Developers lack integrated tools for real-time UI/UX audits and deep AI-driven code analysis within their existing IDE workflows. Build a full-stack suite to automate codebase scanning, dependency mapping, and WCAG 2.1 accessibility diagnostics. Engineered a Python-based analysis engine using **Gemma LLM** with progressive caching; developed a **Go/Vue.js dashboard** for metrics and a **VS Code extension** with CodeLens for one-click AI code patching. Enabled enterprise-scale project scanning with efficient batching, providing instant accessibility fixes and interactive dependency visualization.
- Water Quality Prediction Tool** | *Python, Scikit-learn, Pandas, Streamlit* | 🐙 GitHub June 2025
- Environmental researchers needed an accessible tool to assess water safety from noisy, incomplete datasets. Build an end-to-end ML model and deploy it as a user-friendly web app. Applied supervised learning with data cleaning and feature engineering techniques; deployed the model via a **Streamlit** web interface. Made the tool accessible to non-technical stakeholders, enabling real-time water safety analysis without any coding knowledge.
- Talk Tango** | *Kotlin, XML, Firebase, Android Studio* | 🐙 GitHub April 2024
- Existing messaging apps lacked strong anonymity, exposing user identities. Design and develop an Android chat app prioritizing user privacy. Architected an anonymous real-time messaging app in **Kotlin** using **Firebase Authentication** and **Realtime Database** with **MVVM clean architecture**. Delivered a secure, low-latency messaging experience with improved code maintainability and scalability.

EDUCATION

K.K. Wagh Institute of Engineering Education and Research Nashik, India
B.Tech – Artificial Intelligence and Data Science | CGPA: 7.73 2022 – 2026
S.B.E.S. College of Science Sambhajinagar, India
12th Science (HSC) 2020 – 2022
